

AT MAXXIS we strive to provide the highest quality products and customer service with the goal of creating lifelong Maxxis customers. Anchored by a strong commitment to our values, we form close partnerships with our stakeholders, and together we work to consistently exceed our customers' expectations.

From design to production, from the factory floor to your favorite road or trail, Maxxis products lead the way in technological advances. For bicycle, automotive, light truck, ATV, motorcycle, kart, trailer and lawn & garden, Maxxis provides the quality customers have come to depend on.

Total customer satisfaction has been Maxxis' guiding purpose since 1967. Working toward this goal has built Maxxis into the successful worldwide company it is today. Champions around the world choose Maxxis because they know that our extensive product research, unique designs and rigorous testing standards produce tires that will elevate riders to the next level.

For more information on the entire Maxxis product line, visit us at <http://international.maxxis.com/>

- Consult your owner's manual for specific tire information.
- Clearance around tires must be maintained. Check with the motorcycle manufacturer before attempting to mount tire sizes which differ from those stated in the owner's manual. Altering the tire size may require a different rim size. For this reason, we suggest you consult your dealer to be sure the rim size is compatible before making any changes to the tire size on your vehicle. Be sure adequate clearance is maintained at all times.
- When replacing tube-type tires, be sure to replace the inner tubes. Stretched inner tubes can crease and fail due to thinning of the inner tube rubber. Make sure inner tube size matches the tire size. Consult your motorcycle dealer for correct rim band replacement.
- The air pressure inside the tire is critical to its handling characteristics and load capability. Check cold tire pressure with an accurate tire pressure gauge before every ride. Tire pressure should not be adjusted immediately after a tire has been in use.
- Follow tire pressure guidelines located in your vehicle's owner's manual. Never exceed maximum inflation pressure indicated on your tire's sidewall.
- Check valve cores. Tighten for correct seating. If valve cores are damaged, replace them.
- Check tires for damage before and after riding. Punctured, cracked, bulging or blistered tires should be replaced immediately. If not replaced, damage can result, including sudden and complete tire failure.
- After replacing worn tires, take time to become acquainted with the handling and performance of your new tires. Check inflation pressure frequently and adjust if needed.
- Tire mounting and dismounting should be handled by professionals. Improper mounting or incorrectly mounted tires can lead to damage to the tire, wheel and/or vehicle and injury or death.
- Tire and wheel assemblies should be balanced before use and each time the tire is removed or replaced. Failure to do so will result in accelerated tread wear.
- Check for broken or damaged spokes and replace as necessary.
- Tires marked as front or rear tires should only be used in their designated position.
- Do not retread, regroove, sipe or other wise modify tires.
- Do not use dry or liquid balancers. Do not use liquid sealants.
- Do not store tires in direct sunlight for extended periods of time. Store unmounted tires indoors at temperatures above 32°F.
- Allowing tires to stand in oil or gasoline may have an adverse affect on the rubber compounds of the tire.
- Do not mix radial and bias construction tires unless specifically recommended by the manufacturer as the original equipment of the vehicle.
- Never chemically treat tires (i.e. "soaking" or using tire softener in an attempt to alter tire compound).
- Never operate a vehicle beyond the speed rating denoted on the sidewall of the tires. Do not exceed the load rating denoted on the tire sidewall. These situations can cause tire damage, possibly resulting in catastrophic tire failure.
- Wheel alignment is critical to tread life and tire safety. Replace bent or damaged rims or wheels immediately.
- Failure to follow these guidelines can result in accelerated tread wear and may cause catastrophic tire failure. This may result in accident, injury, or death.

SLICK SUPERMAXX RACE MA-RS

- Track-designed tires with excellent grip and outstanding balance, further enhancing performance in handling and cornering stability.
- New compound make improve excellent grip performance.

TIRE SIZE	LOAD/ SPEED RATING	OVERALL DIAMETER (INCH)	SECTION WIDTH (INCH)	RIM SIZE (INCH)	TREAD DEPTH (INCH)

SUPERMAXX RACE MA-RACE

- Track tyre profiles for agile maneuverability in the heat of the race.
- New compound make improve excellent grip performance.
- Enhanced structure to improve support and high-speed stability.

Technical Feature

- High-land ratio design of pattern**
-Improve grip and handling.
- Lower sea-land ratio at center part**
-Improve hi-speed stability.
-Reduce wear and extend life span.
- Tread tapering structure design**
-improve tire rigidity.
-improve manipulation stability.
-less heat decay.

SUPERMAXX HS MA-HS

- Mono-spiral steel breaker design improve tire stiffness, provides precise cornering behavior and extraordinary handling stability.
- New carbon compound makes excellent dry grip.
- Enhanced structure maintain straight-line driving stability and improves tilting stability.
- Enlarge the ground contact area to increase grip and cornering stability

Technical Feature

- Short groove design at the shoulder**
-Accelerate heat dissipation.
- Lower sea-land ratio at center part**
-Provide confidently high-speed stability and mileage when straight riding.
- Linear speed sense design**
-Good average abrasion and improved cornering rigidity.

SUPERMAXX SPORT MA-SP

- Mono-spiral steel breaker design improves tire stiffness, provides precise cornering behavior and extraordinary handling stability.
- Full-silica high-grip compound and enhanced structure make excellent dry and wet grip.
- New generation compound design provides high mileage, straight stability, extremely grip and traction at the same time.
- Low sea ratio design enhances contact patch and provides excellent grip performance.

SUPERMAXX ST3 MA-ST3

- Mono-spiral steel breaker design improve tire stiffness, provides precise cornering behavior and extraordinary handling stability.
- New silica high-grip compound and enhanced structure makes excellent dry and wet grip.
- New generation dual-compound design provides high mileage , straight stability , extremely grip and traction at the same time.
- Symmetrical parallel design with pattern-Good average wear and Improved high-speed stability in corner

Technical Feature

- 1 High sea-land ratio**
-High drainage efficiency.
-Balanced stability and handling.
- 2 Lower sea-land ratio at center part**
-Provide confidently high-speed stability and mileage when straight riding.
- 3 Symmetrical parallel design with pattern**
-Good average wear and Improved high-speed stability in corner.

PROMAXX SPORT MA-SP(L)

- To achieve three requirements : Wear mileage 、handling and grip.
- Keep a pattern ratio between shoulder and tread having better grip、stable during cornering and handling.
- New Semi Silica recipe get the gripping ability of the compound and the ground has been greatly improved.
- Strengthening the carcass structure, radial stiffness gets more 15% and lateral stiffness also get more 40%.

Technical Feature

P-code material

Under the same load conditions, the P-code material exhibits minimal deformation.

TOURING / *Classic*
M6011F / M6011R

- The specially formulated and matched front/rear tread pattern provides excellent traction and durability in wet weather.
- Deep offset tread grooves channel water away from the contact patch.
- Additional stability is provided by the offset center rib, which resists tracking over highway rain grooves and steel grated bridges.

MAXXVENTURE ΔT MA-AT

- Suitable for 70% good roads / 30% rough roads, multi-purpose surfaces.
- Higher sra ratio design to provides excellent drainage and wet grip performance °
- Cross-pattern design enhances tire traction.
- Central block pattern design enhances straight-line stability.

Technical Feature

- Central block pattern design**
-Enhances straight-line stability.
- Bridge-type design**
-Increases tread block strength
- Cross-groove design**
-Enhances tire traction.
- Pentagonal block pattern design on the tire shoulder.**
-Enhances tire drainage and sand expulsion

MAXXVENTURE XTR MA-XTR

- New 60/40 ADV with directional noise reduction multi-tread pitch arrangement.
- The rear combine with step structure behind central knobs and new ADV compound increase stability.

Technical Feature

- 1 Well-design step structure enhance tread rigidity which increase stability.
- 2 Multi-tread pitch arrangement reduce rolling noise .

Test Result

MAXXVENTURE MT MA-MT

- Suitable for 50% on-road / 50% off-road diversified terrain °
- Higher sea ratio design to provides excellent drainage and wet grip performance °
- The tread groove bottom bridge design to improves the stiffness of the tread and the driving stability °
- Improve the carcass support and maintain high load stability °

Technical Feature

- 1 **Cubic Patten Design**
-Not easy to adhere to soil.
- 2 **Patterned groove reinforced design**
-Improve the stiffness of the tire shoulder pattern.
-Optimized ride stability.
- 3 **Tapering design at the shoulders**
-Improve tire drainage and sand drainage.

MAXXCROSS MXST+ M7332F / M7332R

- Racing oriented rubber compound delivers excellent traction and superb stability.
- Unique knobs design provides longer lifespan.
- The uniquely directional spaced tread pattern and knob design give MX-ST superior handling capabilities and offer reliable predictability when cornering.
- Light weight and extra strong construction boot confidence when jumping and improve straight-line braking control.

MAXXCROSS MXMH

M7325F / M7326R

- The front tire with uniquely directional pattern design gives superior handling on mid hard terrain.
- The rear with wedged central knobs and half shoulder knobs offer better stability and enhance tear resistance.

Technical Feature

- 1 Unique V-shape knobs gives outstanding traction.
- 2 Wedged knobs bottom enhance knobs stability and increase durability.
- 3 Spindle shape central knobs arrangement maximize contact grip and straight stability.
- 4 Half shoulder and shoulder block with directional arrangement give superb cornering traction control.

MaxxEnduro

M7325 / M7324

- Racing oriented rubber compound delivers excellent traction, superb stability and longer lifespan.
- Combine with rear M-7324 which offers balanced on straight line and cornering.
- **M7325 Front**
 - M7325 enduro features of superior grip and handling directional pattern and with a larger chamber profile and strong construction that increase comfort on extreme condition.
 - DOT and E-mark are approved.
- **M7324 Rear**
 - Unique directional knobs and M-shaped groove tread design offer excellent traction, handling and stability for all terrain.
 - Reinforced sidewall offers excellent stability and torque-wrenching performance.
 - DOT and E-mark approved.

Technical Feature

- 1 Spindle shape central knobs arrangement maximize contact grip and straight stability.
- 2 Half shoulder and shoulder block with directional arrangement give superb cornering traction control.
- 3 Larger chamber profile and extra strong construction gives rider more confidence on Hard Enduro condition.

MA-XR1

- High-technology pattern design provides excellent dry performance.
- Directional pattern design adds aggressive straight-line and cornering.
- Special tire construction improves stability for high-speed.

Technical Feature

- Special cushion layer design, Aramid material, highest level of heat resistance and strength during high-speed heavy braking into a corner, the vehicle's forward weight shift can withstand greater counterforces
- Elongated High-Rigidity Bead rubber ensures more uniform distribution of sidewall rigidity, providing better support.

MA-WG2

- Tread pattern design retains the central land ratio, which can improve wear mileage. Additionally, the main and secondary groove widths are widened, increasing the sea-to-land ratio, thereby enhancing drainage performance.
- Excellent wet braking performance, rubber compound formula achieves energy-saving effects, and its hydrophilic properties provide grip on slippery roads.
- The rubber compound formula has high stiffness, which can enhance the longitudinal stiffness of the tire, reducing carcass deformation during braking and thereby shortening the braking distance.
- The high-strength cord design with a two-layer diagonal structure provides toughness, getting better support and cornering stability.

The (*) symbol indicates that the product is still in the prototype stage.

S98 SPORT

M0098S

- Special tread dual compound formula design provides straight riding with great tread wear, excellent cornering grip and traction.
- Excellent tire section design provides controlling and stability in high speed.
- Streamline tread pattern design and increased groove area exalt safety and wet grip performance in the rainy day.

TIRE SIZE	LOAD/SPEED RATING	OVERALL DIAMETER (INCH)	SECTION WIDTH (INCH)	RIM SIZE (INCH)	TREAD DEPTH (INCH)
M0098S					
90/90-10	55J/TL	16.38	3.54	2.15X10	7/32

MA-R1N

- The racing compound endows optimal traction and stability.
- The sharp groove disperses water quickly and enlarge contact patch for safety.
- Directional tread pattern with deluxe tread compound to fulfill high-level grip for straight and turns.

TIRE SIZE	LOAD/SPEED RATING	OVERALL DIAMETER (INCH)	SECTION WIDTH (INCH)	RIM SIZE (INCH)	TREAD DEPTH (INCH)

MA-MBA

- Snake-like Design: Featuring an asymmetric pattern with wider grooves and a central channel to enhance water drainage. This design maintains the land-to-sea ratio, ensuring tread stiffness and stability without compromising on firmness.
- Groove Side Chamfer Design: Reduces stress concentration, delaying uneven wear and tear.
- Special Reinforced Ply Material: Provides better stability, offering superior performance in terms of stability and handling during riding.

Technical Feature

Reduces stress concentration, delaying uneven wear and tear.

MA-CT1

MA-CT1

- Main Groove: Ultra-wide main groove for efficient water drainage, high sea-to-land ratio lateral groove design, and enhanced safety on wet surfaces.
- Directional Pattern:
 - Steering - Front Wheel: The reverse pattern offers better braking power, effectively shortening stopping distances.
 - Driving - Rear Wheel: The forward pattern improves water drainage.
- Central Land Ratio: Enhances dry grip and reduces sliding and wear.
- Special Family SIPE: Inherits the spirit of the S98 family, accelerating warm-up time and improving the fit between the tread and the road surface.
- Double Angle Design: Reducing edge wear and enhancing overall wear resistance.

CS-V6

- The optimization angle design of central S groove provides orientation and better traction.
- The average void ratio design enhances cornering grip.
- The high land ratio design increases tire's contact area availably and enhances cornering grip.
- The design of tiny groove reduces stress.

MA-3D

- The optimal Diamond design pattern, enhances wet grip and cornering traction.
- A directional tread pattern enhances both wet and rain condition.
- Absorbing shock and vibration of tire, protect the rim and comfortable For rider.

MA-EV

- The major pattern of S type joint with the minor pattern by cross grooves enhances the ability of drain and increase wet grip.
- Lateral grooves design with high void ratio disperses water quickly and increases cornering grip.
- Directional center pattern designs decrease rolling resistance.

MA-EV Front

- Reversed pattern design provides better braking.

MA-EV Rear

- 3D SIPE: Reduce tread stiffness and realize better contact feeling when braking.
